## **AGENDA**

### **8:30AM - Tailgate**

Check in for the day's event. Tailgate over coffee and refreshments with the Street Tree Seminar Board and our Sponsors.

### **9:00 am - Parkland Tour**

Experience the venue from the ground up - from design to maintenance  
Led by Mia Lehrer and Eric Merecki and Kush Parekh from Studio MLA, Miles Cook from Hollywood Park, and Bret Richardson from Brightview Landscape

### **11:00 am - migrate into SoFi space**

### **11:15 am - Lunch**

Question & Answer from morning tours with Miles Cook from Hollywood Park, and Bret Richardson from Brightview

### **12:15 - Stadium Tours\***

Venture "behind the scenes" of SoFi Stadium. Our guides will share the background and attributes of the stadium including architectural, engineering, and sustainability breakdown. How the stadium was built, why it's built the way that it is (earthquake measures, flight paths from LAX), a deeper dive into the structure breakdown, with information about the ecosystem, native plant usage and much more!

### **1:15 - Field Experience**

Starting with a tunnel run experience out to the turf, with a tunnel of lights, music, and video to hype you up. Then there are combine like activities including field goal kick, 40-yard dash, the shuttle agility test, quarterback throwing challenge, and 50 yards dedicated to free play. The field experience also includes the Ram's and Chargers locker rooms, media rooms, and other VIP areas on ground level.

### **2:30 - Adjourn**

***\*Signed waivers required***

## **About the Venue**

**SoFi Stadium and Hollywood Park**, a near 300-acre sports and entertainment destination was developed by Los Angeles Rams Owner/Chairman E. Stanley Kroenke. Kroenke worked with Studio MLA, a landscape architecture and urban design studio, to create civic and environmentally conscious landscape solutions across three key areas: water capture and reuse, the utilization of 100 percent Southern California-native plant species, and the continued development of public parks for year-round use.

SoFi Stadium and Hollywood Park's focus on sustainable landscape solutions and water conservation led to the creation of Lake Park, which functions as open recreational space for the community and a novel water recycling system. Inspired by the original water feature that was part of the former Hollywood Park racetrack, Lake Park consists of an upper and lower lake separated by cascading waterfalls. At approximately 6 acres and 16 million gallons of water, the lake is surrounded by an additional 6 acres of parkland. The lake functions as a water recycling system by collecting 70-80 percent of stormwater runoff from around the site, filtering it through natural wetlands and mechanical systems, and then using it to irrigate the surrounding parkland.

Additionally, the site's over 5,000 trees and many species of plants are all native to Southern California and represent the five main ecologies that make up the mediterranean biome that Southern California inhabits. By purposefully selecting plants and trees that are native to the region, it promotes the regeneration of habitats that were previously missing in the area and encourages the return of native wildlife such as warblers, honeybees and more. The landscape design is not only striking, but it also simultaneously makes a significant contribution to the environment with close to 240,000 pounds of CO2 sequestered per year by the thousands of trees on site.
